

AR Electric Field — Cube AR

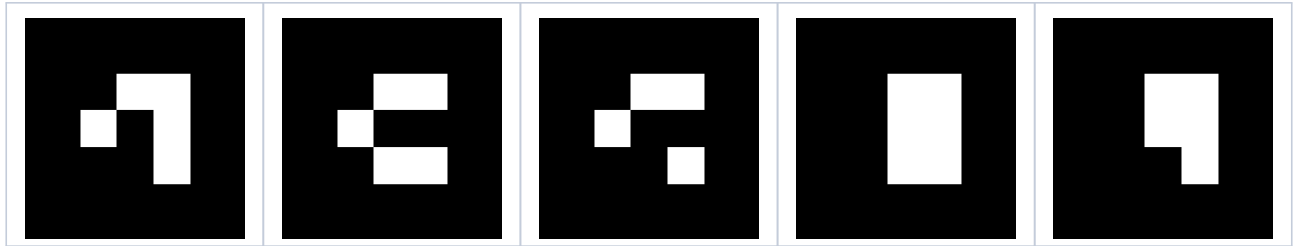

Stick **five** markers on five faces of a small box (top + four sides; leave the bottom). The charge sits at the **cube centre**. Build a + cube (faces 0–4) and a – cube (faces 5–9); lay the gun cards flat beside them. Open **Cube AR**, tap Start camera, and walk around the 3-D field. Print at 100% (each pattern = **3.2 cm**). Calibrate the centre with ?cube= ($\frac{1}{2}$ edge ÷ marker width).

barcode 11

The guns fire test charges along their printed arrow; rotate a beam with ?gundir= if needed. The cube codes are independent of the Plane scheme — only run one scheme at a time.
