

Electron gun in a field

Add an **electron-gun** sticker: it fires test charges along its printed arrow that bend through the field of nearby charges (the + gun fires e^+ , the – gun fires e^-).

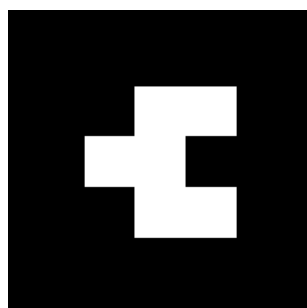

+ charge

barcode 0

– charge

barcode 1

+ gun

barcode 2

– gun

barcode 3

How to use. Print at **100% / actual size** (each black pattern = **4 cm**; check with a ruler) and cut the cards apart, keeping the white border. Lay them flat on a desk, open **Plane AR** in Safari and tap **Start camera**. After it auto-locks, each point charge floats above its sticker and the 3-D field appears — walk around to view it; tap **Re-scan** for a new layout.
